

## Preparing Students for Tomorrow's Workforce

### ASTM International Webinar

April 2, 2014

1:00-2:30 pm EST

Education of students in pursuit of science, technology, engineering and mathematics (STEM) careers and entry-level workforce development is a significant priority to industry, academic institutions and the standards community. ASTM International can be a direct conduit for students to attain experience prior to entering the workforce. The combination of direct participation of stakeholders from industry in our standards development along with the online tools, training and certification services provides students with an opportunity for additional education, experience and networking. Engaging students while in study provides businesses a forum for transitioning potential employees seamlessly into the workforce.

**REGISTER NOW**

to learn how through ASTM International you can continue to influence the future of your industry!
