

# MOTOR SOCKS

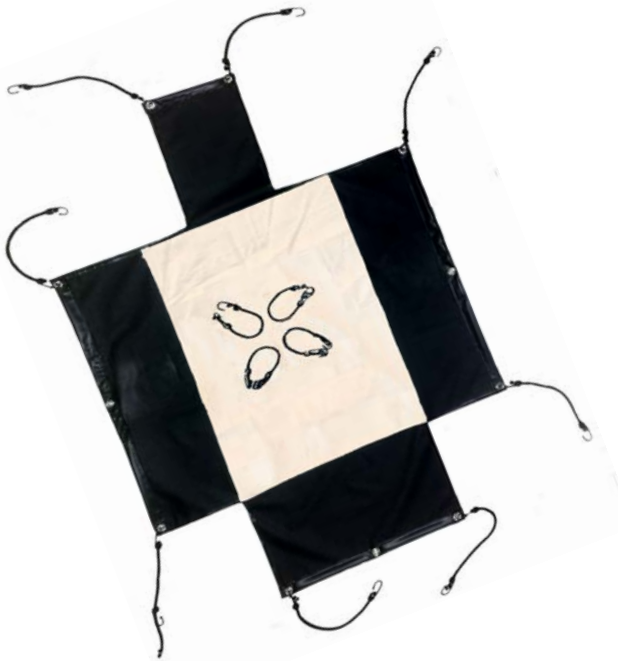

Lets Be Friends!

**MotorSocks** are used to protect finished flooring from hydraulic fluid leaks that might occur at the drive motors on electric scissor lifts.

MotorSocks are an accessory that is most commonly used on jobsites that require equipment to have DripDiapers to collect any fluid leaks that could occur from the chassis of equipment.

Ask about ordering MotorSocks anytime you purchase a DripDiaper! They go great with part number 3219DD which fit 19' Skyjack scissor lifts.
