

RecallTrak[®]

Creating opportunities to grow your business.

RecallChek[®] is the first service for consumer recalls in the U.S. and has compiled over 205 million recalls from public records, to create a fail-safe system to check for dangerous flaws with home appliances.

If a manufacturer designs a dangerous product, they MUST recall that item and fix it free of charge! RecallChek will provide the information to promptly resolve any potential recall issues.

RecallTrak

Included as a lifetime service with your purchase of RecallChek (or provided free on inspections done by your inspection company) is our monthly email newsletter, RecallTrak. This newsletter notifies the homeowner of any new recalls on your appliances, and offers our helpful Monthly Maintenance Minute updates.

How RecallTrak works:

1. Register for RecallTrak through the email you receive for the RecallChek report with that inspector.
2. You just add your contact information and upload a logo or photo of yourself, it's that easy.
3. As a RecallTrak Registered Agent, you have the option to customize the newsletter that is already going to your past clients, in a Constant Contact style marketing email, and manage your contacts in your account.
4. Just book your next inspection with your Home Inspector who offers RecallChek today!

Exclusive Deals for RecallTrak Clients!

Keeping Safe Around Your Fireplace

About 11 million homes have gas fireplaces.

- * Supervise children, the elderly, disabled and pets near a fireplace, stove or insert that has been turned off.
- * Keep any fireplace remote out of the reach of children.
- * Install a switch lock to keep kids from turning on the fireplace.
- * Make sure family members know that the glass door can be very hot.
- * Be aware that metal surfaces, including door frames and grills, can get very hot.

Fireplace owners can contact their gas-fireplace manufacturer to see if it sells a screen that fits. There may also be a fireplace screen that will fit sold by other manufacturers.

Your Monthly Maintenance Minute

Most people only think of ceiling fans when they want to stay cool, but they can actually help keep you warmer and save as much as 10% on heating costs during the cooler months. More recent ceiling units come with a handy switch that reverses the direction of the blades.

How do you know if your fan is ready for winter? As you look up, the blades should be turning clockwise. A counterclockwise rotation produces cooling breezes while switching to clockwise makes it warmer: the warm air pooled at the ceiling is pushed down to your living space.
