

21st Century Evidence and Property Control

BACS™

ACCESS.it®

Bring your evidence and property control into the 21st century. Those 1950's style lockers - are they really doing the job effectively? Probably not; unfortunately, this highly important area of a police department's facility is usually lagging the rest of the department in technology. The hard work your officers and detectives put into collecting evidence to bring criminals to justice should not be lost on increasing defense challenges based on inadequate chain of custody. In this digital age, your options for managing evidence have caught up with technological advances.

It boggles the mind, how technology has transformed our lives, allowing us all to accomplish so much more in a day's work. The BACS Evidence Management System has revolutionized temporary evidence storage. Getting rid of the old clunky lockers and replacing them with the automated BACS system has been proven to cut property control officer's evidence processing time in half. Chain of custody is tightened, court costs are reduced and officers no longer have to scramble to track down the property officer to pick up evidence for court! This is a win for the entire department, and well worth the investment. ***We have the results to prove it.***

BACS™

The first BACS Evidence Management System was installed in August of 2012 in North Andover Police Department (NAPD) in Massachusetts. With over a year in use, NAPD has provided the resulting facts and figures to help other police departments evaluate the return on investment for implementing the BACS System. Details are reported in our newly published white paper showing North Andover having a payback of approximately 1.5 years.

If you are in the process of planning a new building, or interested in upgrading what you have, contact us to evaluate your needs and budget required. For additional information, [please click on the link to read the white paper.](#)
