

Come meet with parents
and teachers for an
evening of discussion,
refreshments and
inspiring conversation!

Brain Research and Waldorf Education

Presented by **Patti Connolly**
Waldorf teacher and educator

Mon. March 17, 2014
7 p.m.-8:30 p.m.
Meadows Hall
Adults only please

Utilizing the latest brain-imaging technology, researchers are able to explain how human beings' brains learn best. With Patti Connolly -- renowned Waldorf teacher and educator-- discover how the brain develops over the course of childhood, and how Waldorf education supports its gradual, holistic process.

Patti Connolly became involved with Waldorf education when searching for the best instruction for her daughter, Emi, over 24 years ago. Since there was no Waldorf school near her home, she and her husband chose to homeschool Emi and a few years later helped found the Cedar Springs Waldorf School in 1989. She has enjoyed pursuing her love for learning as both an independent and public Waldorf School class teacher, kindergarten teacher, specialty teacher, education director, teacher mentor/evaluator and adult educator in both the United States and Nigeria. She recently created a resource website for Waldorf educators, www.waldorfinspirations.com, with fellow Waldorf mentor Janet Langley.
