

## Employee Spotlights: Bruce White and Steven Morrison, Engineering Technicians

Bruce and Steven are responsible for Panel Shop operation at ACS. So because they work as a team we thought we would feature them as a team.

### Bruce

What does your position entail?

My Position entails the assembly and fabrication of electromechanical equipment; the primary product being vision systems.

How have things changed since you first started?

I began working at ACS in 2008, originally hired as an electrical/ mechanical technician. At our new location, we have a much larger shop. The new mill allows us to precisely fabricate brackets in- house.

Can you tell us a little about your background and how it helps you in this position?

.My background is mostly electro-mechanical, having worked in photo processing, biomedical and photo editing. I use my technical experience daily in the shop. My photo editing experience comes in handy when I take the build pictures.

What do you like best about working at ACS?

Sometimes the engineers just give you the ball and let you run with it. We solve problems for major companies. I get a kick out of walking the aisles in a store and viewing products that ACS is involved with.

Describe some of your hobbies – what do you like to do outside of ACS?

In my shop at home, I build and fix things. I also enjoy working on cars, computers and electronics. Photography and photo editing is also a hobby; there are over twenty thousand images on my server.

What is one thing your customers might find surprising about you?

I read in a *Popular Mechanics* magazine how one could buy and build a house in kit form. That is how I built my first house.

### Steven

What does your position entail?

I am responsible for building control panels and mechanical assembly of systems that are sold. I also support the engineers when needed on installs.

How have things changed since you first started?

I am in my third year at ACS, since I have started here we keep growing, there has been a steady flow of work and I guess the biggest change is the new building which gave us much needed room for our panel shop.

Tell us a little about your background

I have worked in the Electrical Industry for over 15 years, both in commercial and industrial install, remodel and maintenance. One of the key things I have learned is be prepared for change, things can change in a instant. Oh and measure twice cut once.

What do you like best about working at ACS?

I would have to say that one of the best things about working for ACS is my co-workers, and the diversity of the projects I get to build.

What do you like to do outside of ACS?

I'm really a pretty boring guy, my wife and I both enjoy flea markets and yard sales just looking for something interesting. I'm a big family man and there is nothing better to me than a night at home with my wife and our 3 year old, Ava. We love the beach and spending time at the lake.

What is one thing your customers might find surprising about you?

Like I said above I'm pretty boring, one thing I guess I love to cook, most that have tried my BBQ sauce love it.
