The Impact of Health-Care Costs on Social Security

For many retirees and their families, Social Security provides a dependable source of income. In fact, for the majority of retirees, Social Security accounts for at least half of their income (Source: Fast Facts & Figures About Social Security, 2013). However, more of that income is being spent on health-related costs each year, leaving less available for other retirement expenses.

The importance of Social Security

Social Security is important because it provides a retirement income you can't outlive. In addition, benefits are available for your spouse based on your benefit amount during your lifetime, and at your death in the form of survivor's benefits. And, these benefits typically are adjusted for inflation (but not always; there was no cost-of-living increase for the years 2010 and 2011). That's why for many people, Social Security is an especially important source of retirement income.

Rising health-care costs

You might assume that when you reach age 65, Medicare will cover most of your health-care costs. But in reality, Medicare pays for only a portion of the cost for most health-care services, leaving a potentially large amount of uninsured medical expenses.

How much you'll ultimately spend on health care generally depends on when you retire, how long you live, your health status, and the cost of medical care in your area. Nevertheless, insurance premiums for Medicare Part B (doctor's visits) and Part D (drug benefit), along with Medigap insurance, could cost hundreds of dollars each month for a married couple. In addition, there are co-pays and deductibles to consider (e.g., after paying the first \$147 in Part B expenses per year, you pay 20% of the Medicare-approved amount for services thereafter). Your out-of-pocket yearly costs for medical care, medications, and insurance could easily exceed thousands of dollars.

Medicare's impact on Social Security

Most people age 65 and older receive Medicare. Part A is generally free, but Parts B and D have monthly premiums. The Part B premium generally is deducted from your Social Security check, while Part D has several payment alternatives. In 2013, the premium for Part B was \$104.90 per month. The cost for Part D coverage varies, but usually averages between \$30 and \$60 per month (unless participants qualify for low-income assistance). Part B premiums have increased each year and are expected to continue to do so, while Part D premiums vary by plan, benefits provided, deductibles, and coinsurance amounts. And, if you enroll late for either Part B or D, your cost may be permanently increased.

In addition, Medicare Parts B and D are means tested, meaning that if your income exceeds a predetermined income cap, a surcharge is added to the basic premium. For example, an individual with a modified adjusted gross income between \$85,000 and \$170,000 may pay an additional 40% for Part B and an additional \$11.60 per month for Part D.

Note: Part C, Medicare Advantage plans, are offered by private companies that contract with Medicare to provide you with all your Part A and Part B benefits, often including drug coverage. While the premiums for these plans are not subtracted from Social Security income, they are increasing annually as well.

The bottom line

The combination of rising Medicare premiums and out-of-pocket health-care costs can use up more of your fixed income, such as Social Security. As a result, you may need to spend more of your retirement savings than you expected for health-related costs, leaving you unable to afford large, unanticipated expenses. Depending on your circumstances, spending more on health-care costs, including Medicare, may leave you with less available for other everyday expenditures and reduce your nest egg, which can impact the quality of your retirement.
