

Successful Interns in HIT

Over the past year, interns have become an integral component of HealthIE Nevada and the Health Information Technology (HIT) team at *HealthInsight*. Internships offer the opportunity for students to learn about their respective fields in a real-world atmosphere. These positions also allow *HealthInsight* to benefit from the unique skills and perspectives that students can offer. Nevada has an expansive university system that offers skilled students to local employers who act as important resources for the community.

The HIT team has had two successful interns over the past year from UNLV:

Jordan Norwood, Graduate student at UNLV

Health care administration major Jordan Norwood joined the team in February 2014. She helped HealthIE Nevada obtain 20,000 consents for the functionality of their health information exchange and HIPAA compliance. Using her background in health information technology, she assisted with client communications and strategies. Through teamwork and efficient collaboration, the goal was realized before the July 1 deadline.

Norwood says she has enjoyed her time with HealthIE Nevada, and has gathered information and skills that will help her far beyond her internship. She thanks *HealthInsight* for the opportunity to learn from the best.

Evan Rosenberry, Undergraduate student at UNLV

Marketing student Evan Rosenberry worked with *HealthInsight* for 11 months. Originally hired for a summer internship in 2013, he showed versatility and commitment, staying on for both fall and spring semesters as he finished his senior year.

Rosenberry has helped with research, strategizing and branding for HealthIE Nevada along with many other projects within *HealthInsight*. He took on newsletters, video editing and formatting, and composing internal business reports. He quickly learned a variety of new skills and showed excitement for his work and the goals of HealthIE Nevada.

Rosenberry has been a great addition to the HIT team, and serves as further proof that the *HealthInsight* internship program has been successful.
