

Elliott Museum at night. "Let your Mind Soar" a sculpture by Peter Freudenberg.

FAMILY FUN DAY: Saturday, November 8th, 11 a.m.

Come and find out: **WHAT MAKE 'YOU' SO YOU?**
at the Elliott Museum, 825 NE Ocean Boulevard

Ever wanted to don a white coat and pretend to be a scientist? What if your whole family could pretend together?

Bring your parents, your grandparents on Saturday, November 8th at 11 a.m. at the Elliott Museum. Come and learn all about DNA, how it makes us unique and different at the same time. And learn about **YOUR** DNA as you swab your own cheek and isolate your families DNA.

Scientists from Scripps Florida help and share what they do to in this fun and exciting field of science. Drs. Deborah Leach-Scampavia and Rosie Albarran-Zeckler of Scripps Research Institute, will guide participants through the steps to isolate their own DNA. Along the way, you will learn about the composition of DNA, its function in the human body, and how biomedical researchers study DNA to learn more about human disease and new ways to develop treatments.

[Seating is limited. RSVP today!](#)
