

We Improve Communication for Life

CSHC to Offer New, Innovative Treatment!

We're excited to announce that we will be offering a new, innovative treatment called Neurofeedback. Neurofeedback is a non-invasive approach to train the brain to function more efficiently.

During treatment small electrodes are placed on the scalp to measure brainwave activity. The person receiving treatment watches a video game, movie, or a relaxing scene. The feedback on the screen rewards the individual while the brain learns to self-regulate. With repeated sessions, the individual will learn to maintain a more regulated state in their daily life.

The treatment is very individualized. The frequencies targeted and the electrode placements are determined by the conditions to be treated. Each session is specific to the individual and their symptoms.

Studies have shown patients receiving Neurofeedback treatment have improved symptoms related to:

- ADHD
- Autism Spectrum Disorder
- Sensory Processing Disorder
- Post-Traumatic Stress Disorder
- Anxiety
- Migraines and Headaches
- Seizures

To find out more about this new, innovative treatment please call (614) 261.5483. Even more information can be found at www.eeginfo.com. To learn more about our other services, please visit www.columbusspeech.org or call (614) 263.5151.
